

The International Ethnological Food Research Group

The International Ethnological Food Research Group was founded in 1970.

The working group organizes biannual conferences, attracting a broad range of scholars from the SIEF network as well as from various disciplines within Food Studies. The global diversity of food cultures is reflected at the conferences.

A selection of peer reviewed papers from the conferences are published in book format. 20 volumes of conference proceedings have been published since the working group was founded.
